Vlc language translator free download
One of the best video players for Mac must be VideoLAN's VLC Player, now updated to version 1.1.8. This update fixes a number of minor errors and adds more support for various features, including better language translation, as well as updating security patches for known vulnerabilities. Basic security technologies identified vulnerabilities in the AMV and NSV files when addressed by previous versions of VLC. Two vulnerabilities have been identified in the VLC Media Player [1] when handling AMV and NSV file formats. These vulnerabilities can be exploited by a remote attacker to obtain arbitrary code execution with the permissions of the user running VLC. The update to version 1.1.8 resolves these issues. Other fixes included in update 1.1.8 are: Security update on video width on some demuxers Support for a new Dirac codec based on libschroedinger Package of the new VP8/Wemm encoder Bali Notable updates to MP4, OGG, and APE demuxers Important updates to most language translations Corrections to Skins2 supports winamp2 Skins Upgrade with the appearance of VLC for Mac OS X Automatic Detection for TXT subtitles are fixed Corrections to Windows integration, especially regarding volume keys Codecs updates Many various fixes If you find that some of your videos, especially AVI files, do not play correctly in QuickTime Player, try downloading the free VLC Player. What is the video player of your choice for your Mac? Let me know in the comments! Be sure to follow MacFixIt on Twitter and contribute to the CNET Mac forum. VLC media player internationalization VLC media player is translated using GNU Gettext. Stats to detect VLC How to translate? How can I help? We always need new translators to help identify VLC. You can create a localization for an unsupported language, help translators of a given language (either by translation or revision) Since most of the translation work has been moved to transifex, you'll probably want to check the current information instead of the following slightly discredited information. For each existing language, there is a translation conservator. You need to contact him to coordinate help. If you want to make a translation for a new language, please read the howto List of translation If you want to get subtitles automatically for movies in VLC Media Player, then you can simply do it with the help of a VLC add-on called VLSub. It is the highest rated add-on for the player because of its usefulness. Once you download and install the simple plugin, it will automatically look for subtitles for the current movie being played. So make sure you're connected to the internet. It's It's a list of options he's found, and you can choose the right one for your video. What this VLC subtitle plugin does is that, once installed, it adds a new menu as View > VLSub. Click the new menu item, specify the search criteria —search by hash or search by name—, and the results will be displayed. It is the basis of popular subtitle web pages based on search criteria. Choose the best result for your video and the subtitles will load. You will need VLC 2.2.* or VLC 3 to work. Install the plugin, access it and search. It's so easy. There is no longer manual downloading, browsing and loading subtitles for every movie you play. Everything is dealt with by the software. Here are the detailed steps to get subtitles automatically for movies in VLC Media Player: Download the plugin from here. Export the contents of the zip file. The extensions folder for a different operating system is as follows: Windows: C:\Program Files\VideoLAN\VLC\lua\extensions\ Linux: /usr/lib/vlc/lua/extensions/ MAC OS X: /Users/<your_name>/Library/Application Support/org.videolan.vlc/lua/extensions/ Restart or open VLC Media Player. View Access > Vlsub. Click Search by name after confirming the title of the movie. Change it if you have to. Highlight the correct subtitle and click on the Download option. Your subtitle file will be downloaded and you will start to see the subtitle text on the screen immediately. If you need to change it, then repeat the procedure. Access View > VLSub > Research after you have loaded something using the plugin. This menu is intended to search for a new file. If you have problems installing VLSub: Learn how to install a VLC Media Player Addon .lua extension If you want another option/plugin instead of VLSub, try: Subtitles finder. In VLC for Android If you use VLC on your smartphone, then know that it does not require any special addition to load subtitles. There is a built-in feature for this. After you load a movie, press the Audio Tracks and Subtitle button (the second button from the left on the interface itself). After that, tap Get subtitles. The Android app will automatically search for the subtitle and load it on your device screen. All details about the Android app: Automatically download subtitles or manually in VLC for Android For options in the Android app related to subtitles, go to Settings from the hamburger menu. Scroll down to the extra settings where you'll find subtitles. Click on it and you can select the features for it color, background) along with automatic loading. An important option here if you download subtitles is the language of downloading subtitles. Below it, you can select the different languages in which you want to download the movie dialogs. </your_name> </your_name>
